

Pre-Fabricated Brick Arches

Arch Types

- Loose Cut
- Light Weight
- Structural
- Flat Gauged
- Segmental
- Semi Circular

A range of brick specials are available to compliment the arches.

Premier Building Products Anglia Ltd supply a full range of brick arches including loose cut, which are supplied to site shrink wrapped laid out on a board ready for the brick layers to construct.

The second and now most popular option is lightweight arches to be supplied pre-fabricated, in either flat gauge or segmental format. These arches are formed with brick slips bonded to a lightweight backing and are designed to sit on a lintel and only require on-site pointing.

The third option is concrete backed arches. These can be supplied to offer structural support and to include stainless steel bearers. This type of arch can be supplied with one, two or three faces and in flat gauge, segmental, double header, bulls eye and semi-circular formats, and can include stone if required.

All arch types are normally supplied either 215mm or 290mm high with 10mm joints and 102.5mm soffits. The pre-formed segmental arches are supplied including a plastic forma in a colour of your choice.

Benefits of pre-fabricated arches products include:

- Manufactured in any brick type and can be collected from site to guarantee a perfect colour match.
- Quick and easy to install.
- Our light weight arches are often a one man lift.

Pre-Fabricated Brick Arches

The benefits of these lightweight arches includes the precise shape, the complete flexibility of design, the speed of manufacture, and above all the incredible ease of use on site.

Flat Arch Check List

- Flat gauged or developer
